

Figure 1

Figure 2

Figure 3

FIG. 4A is a graph of the membership function for the input variable "Acceptable" in the fuzzy logic system of FIG. 1. The graph shows the membership function for the input variable "Acceptable" as a function of the input value. The input value is represented on the horizontal axis, and the membership function is represented on the vertical axis. The membership function is a trapezoidal shape, with a maximum value of 1.0. The input value is divided into three regions: "Unacceptable", "Acceptable", and "Unacceptable". The "Unacceptable" regions are shaded, and the "Acceptable" region is unshaded. The input value is divided into three regions: "Unacceptable", "Acceptable", and "Unacceptable". The "Unacceptable" regions are shaded, and the "Acceptable" region is unshaded.

Figure 4A

Figure 4B

FIG. 5 is a graph showing the relationship between the number of cycles and the number of cycles.
